

Inspiring Surface Design

Bath Panel

MYKON

The Customer

A professional living in London looking for a striking modern piece of material to use as a bath panel in their home.

The Challenge

The client wanted their bathroom to have a modern yet decorative feel. As the space was quite small it was decided that this look could be achieved by using a modern material to form a removable bath panel.

The Solution

Many Mykon materials were considered for this project. As the material was to be used for a bath panel, the piping behind would create shadows on any translucent panelling.

Hi Clear was chosen because of its highly innovative design and its ability to reflect light in different ways to create an extraordinary visualisation.

The panel needed to be removable in case of any plumbing problems, so many installation methods were suggested including magnetic fixings. Finally the panel was fastened to a wooden frame using silicon sealant which is easy to cut and replace.

The Outcome

The client was extremely happy with the way the panel transformed the bathroom giving the ambience required. The client was so impressed with Mykon's range of materials that she recommends the range to her architectural colleagues.

Hi Clear

An aluminium conical structure sandwiched between toughened glass or polycarbonate.

Lighter and stronger than comparable products, Hi Clear offers an extremely eye catching effect when light hits the surface.

Perfect for creating a unique look - from reception areas to night clubs.
